

Subject: Press Release

OnTo Technology developed and patented (US #12,021,202) a process to neutralize end of life (EOL) lithium-ion batteries such that they are rendered inert. This week OnTo Technology, teamed with ProteQ successfully demonstrated neutralization of various end of life lithium-ion chemistry battery multiple Department of Defense (DoD) hazardous waste generator sites on the Island of Oahu. These demonstrations were conducted using a portable system that was mobilized and operated at multiple DoD facilities. These demonstration events leveraged automated concepts for system improvements to make the process seamless to the operators.
